CONSULTANT

FOR FORMULATORS

## You have the power to turn your ideas into gold.

The perfect ingredients for success in the dynamic paints and coatings world.

Developing **safe, sustainable, compliant, and competitive** paint and coating products is a significant challenge today. Achieving this requires combining various ingredients from different suppliers and ensuring they work together seamlessly. However, developing a new formulation is just the beginning. You also need to keep up with the constantly changing landscape of raw materials and the evolving requirements of your customers.

Having knowledge and expertise in making paints and coatings is great, but it's equally critical to acquire the right raw materials that **fit the requirements** of your new product.

During the development process, it's important to **anticipate and answer** questions as they arise. The sooner you do this, the better. Otherwise, you could **risk wasting time** on formulations that are unlikely to yield results.

So, the key question is, **how to keep track** of all the materials and their properties when working on new paint or coating formulations? Well, besides your knowledge and the right raw materials, there's one more **ingredient that's essential for success** in this complex industry - data.

**But where do you get the data that you can work with?**

## Discover your gold mine.

Safety and technical data sheets are your most valuable source of data and information.

Consider this: **safety, sustainability, compliance, and competitiveness** all rely on the information found in safety data sheets and technical data sheets. These documents contain important information such as composition information, hazardous properties, physical and chemical properties, applications and performance, and other critical information.

Unfortunately, safety data sheets and technical data sheets of raw materials are just documents and **don't allow for easy processing** of data and information. This means you have to spend valuable time transcribing information from these documents before you can use it to create new products.

And with constant updates, the transcription process never seems to end. You end up constantly playing catch-up instead of using your knowledge and talent to **develop cutting-edge products**.

Imagine having access to all the data for every raw material in a structured form that you can easily process, analyze, and **gain insights** from. Now imagine having a tool that allows you to select potential raw materials, draft formulations, and **instantly receive information** on safety, sustainability, compliance, and competitiveness.

Think about how much **time you could save**, how quickly you could **reformulate products** that no longer meet your customer's requirements, and **how much faster** you could draft compliance reports, safety data sheets, and safety labels.

Thankfully, Allchemist makes this possible. With Allchemist, you can gather all the data and information you need in one convenient location and **put it to work for you**.

Allchemist opens up a world of possibilities for you to explore, making it easier than ever to **innovate and succeed** in the paints and coatings industry.

# Unlock new opportunities with Allchemist

It's all about leveraging and utilizing data.

Working with data is like exploring all the amazing capabilities of your new high-tech gadget. When you have all your raw material and formulation **data organized in one place**, you can unlock a whole new world of possibilities to **make your life easier** in all areas of your business.

Allchemist goes beyond collecting data and streamlining the formulation development process. **The real magic happens** when you start developing new formulations. Using the same data, you can create compliant safety data sheets and safety labels with ease, making it faster and easier to ship samples to your customers. No more waiting. Everything moves faster.

With Allchemist, you and your team can get a **better overview** of your entire product

portfolio and **easily share information** with one another. By organizing and categorizing your raw materials and formulations, you can finally have all the knowledge you need right **at your fingertips**.

In addition, Allchemist seamlessly integrates with any external or third-party application or system for further analysis and insights. This enables you to **use the data** you've already collected and generated to **take your business to new heights**.

But that's not all. Allchemist also features cutting-edge tools that allow you to create technical data sheets directly within the platform. This means you can capture and digitize your most important **application and formulation knowledge**, streamlining your processes and making your work even more efficient.

FOR FORMULATORS

# Develop safe, sustainable, compliant, and competitive products faster and smarter than ever before.

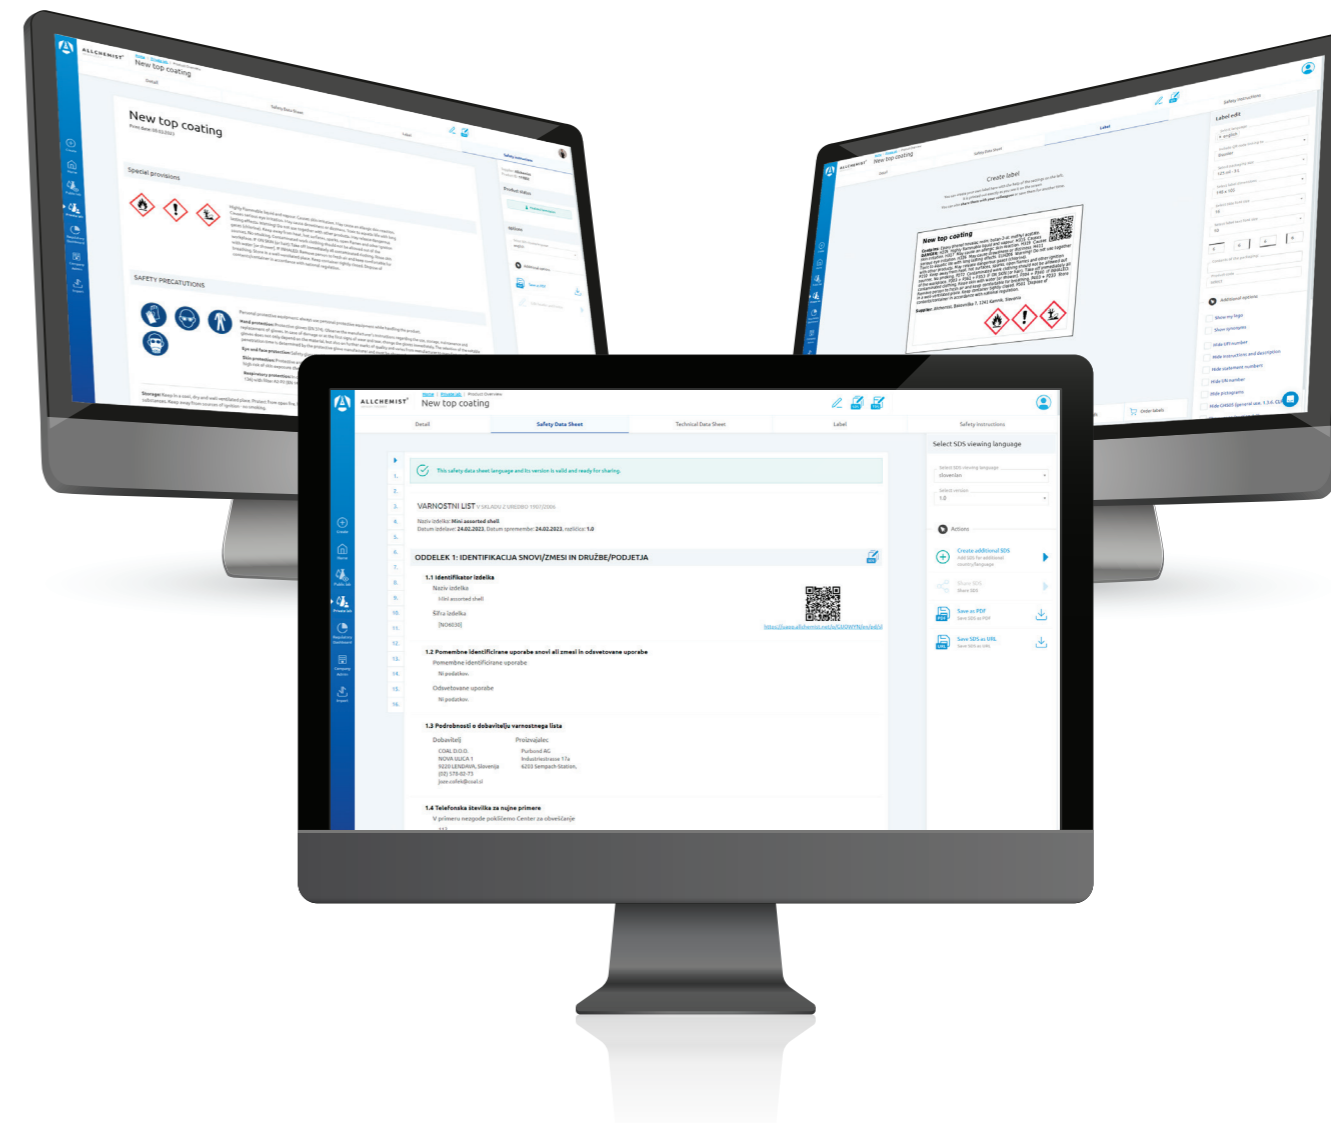

Allchemist is not just a powerful tool for formulators and producers of paints and coatings, it's also a game-changer for the entire supply chain. When you connect with your suppliers using Allchemist, you **unlock the full potential of the platform** and create a seamless flow of information between you and your suppliers.

Your suppliers' output product data and information represent vital input data for your business processes. With Allchemist, your suppliers can easily share raw materials with you, just like sharing documents in Google Docs or on SharePoint. This means that you can directly **use the data and information** from the database to draft formulations - it's as easy as selecting the raw materials and clicking "add to the formulation".

By having access to accurate and up-to-date data on raw materials, you can **make informed decisions** about which materials to use in your formulations. This makes development of safe, sustainable, compliant, and competitive products **faster and smarter** than ever before.

All information and knowledge in one place!

DETAIL, SDS, LABEL, TDS AND SAFETY INSTRUCTION

FOR FORMULATORS

## Security

We regularly test the platform with professionals who help banks keep data safe.

Every document and every formulation created or uploaded to the application is set as private by default.

**Formulation data in Allchemist is in an encrypted form.** Nobody but you can see this part of the application. Even Allchemist administrators don't have access to this part of your laboratory.

In every step within Allchemist, **you are in full control of the privacy of your work or added materials and formulations data.** You are the one deciding with whom you'll share your work or materials, which team members you'll invite to the work group or billing account, and you will be the one who sets their access level and user rights.

However, once you're ready to show your great products to the world, you can just share or publish them.

Colleagues, partners and formulators all around the world will have your products at their fingertips.

# Summary

Rise above current challenges. Get ready for the future.

If you're a formulator in the world of paints and coatings, you know that developing safe, sustainable, compliant, and competitive products is a big challenge.

You need to combine different ingredients from various suppliers and keep up with the constantly changing landscape of raw materials, regulations, and customer requirements.

Data is an essential ingredient for success, but it can be difficult to gather and process from safety and technical data sheets.

Allchemist is a platform that can help you:

- gather, organize, and analyze all the data and information you need **in one place**
- **streamline** the formulation development process, create compliant safety data sheets and safety labels, and
- collaborate with your team, partners and customers in the same digital environment.

Allchemist is a cutting-edge tool to make your work more efficient, so you can develop safe, sustainable, compliant, and competitive products faster and smarter than ever before.
